Hercules Chemical Co. Receives Patent on Johni Quick Bolt®

Passaic, New Jersey (August 17, 2011) – Hercules Chemical Company announced today that the United States Patent and Trademark Office has issued US Patent 7,950,886 covering the already highly popular Johni Quick Bolt closet bolt.

This unique and proprietary bolting system enables the professional plumber to quickly and easily install a toilet by simply pushing down and twisting to tighten the bolt in one quick motion.

“The Johni Quick Bolt is a time-saver for the professional plumber installing a toilet”, said David Siegal, Hercules’ President, CEO, and inventor. “The self-locking nut holds the bolt securely with no wobble and no need for double-nutting, or ineffective wax ‘sculptures’. Made in USA of specially molded high quality high strength thermoplastic, it fits every flange, making it the only device ever needed for the purpose.”

Hercules Johni Quick Bolts are available at plumbing wholesalers nationwide through OateySCS.

Hercules is a manufacturer and marketer of a full line of chemicals and other specialty products for the plumbing and heating industry for almost 100 years
